

Universal Paddling Seat

From Chosen Valley Canoe Accessories

Designed in a joint venture with Peter Axelson and Beneficial Designs (beneficialdesigns.com), our Universal Paddling Seat offers full adjustability and support for a wide variety of needs. The unique seat base clips onto existing bench-style canoe seats, and gives either zero or 7.5 degrees of rear dump. The snap release makes mounting the seat and moving the seat from boat to boat quick and easy. The base has a 2" thick closed cell foam cushion encased in Cordura nylon. This cushion can be used as is, or additional cushions can be added on top of it for added protection. The back structure consists of pelvic, lateral, lumbar and upper-back supports. The back has several vertical adjustments to fit different torso lengths and types. The upper unit (the upper-back rest and laterals) can be adjusted independently or removed completely, for those who don't need the high-level support. The lateral pads also can be used with or without the upper back rest, and the upper back rest can be inverted for wider support at the top of the seat. The pelvic and lateral supports adjust in width making it possible to dial in the seat to specific needs quickly and easily. Tilt adjust of the back structure allows the paddler's center of gravity to shift rearward far enough to enable those with minimal or no abdominal support to paddle (we NEVER recommend ANY belt or strap that would prevent easy wet exits in the event of a capsize). The back unit can also be used in kayaks. Currently it is easily mountable in all Current Designs kayaks, and in all Necky and Old Town kayaks with either the Old Town or new Extrasport seats.

Note: The photos are of the current product. We are constantly improving and enhancing the seat based on user feedback, so future versions may be slightly different than it appears here. Feel free to give us a call to discuss your specific needs and pricing — we can't wait to see you out on the water!
