## Release of Information on Hand Controls for Vehicles with Manual Transmissions

---

I understand that information will be shared with me regarding the development of a prototype set of hand controls for use in automobiles with manual transmissions. The unit consists of a single mechanism operated by the left hand, which facilitates control of the throttle brake and clutch pedals of the vehicle simultaneously.

I am aware that the prototype currently under evaluation and development has in no way been tested or approved for use by anyone. Use of these hand controls requires extensive hand-eye coordination. Improper use could result in injury or death.

Furthermore, I understand that the drawings and illustrations provided to me represent only prototype hand controls tested by only one user, Peter Axelson.

I will not hold Beneficial Designs, Inc., or Peter Axelson, liable as the provider of this information to me.

Furthermore, I will not disclose this information to other persons interested in these adaptive controls. Any such inquiries or requests for information shall be directed to Beneficial Designs, Inc.

I have read, understood and agree to the above prior to receipt of information and drawings regarding the prototypes currently under evaluation by Beneficial Designs, Inc.
